TOUGHER AND MORE DURABLE

The SealGard dairy films incorporate the latest in a host of new resin technologies for improved stiffness and toughness as the film gauge is reduced. The films have been reduced in gauge by 20% while also improving durability performance across all key criteria. Now there's no need to choose between optimized film gauge and durability, SealGard delivers both!

ROBUST BAG SEALS

Bag seal failures are one of the major contributors to leaks, that's why the innovative new SealGard film was developed to provide for a broader sealing window that delivers more consistent and stronger bag seals.

MORE SUSTAINABLE

SealGard dairy film has been reduced in thickness by 20% compared to industry standard films while improving the toughness and durability of the final bag. The result of these improvements is a more sustainable package that uses less material to produce, reduces wasted product due to leaks and punctures which leads to optimized distribution efficiency.
FEATURES
The new SealGard dairy film boasts features that until now haven’t been achieved, like improved sealing characteristics, reduced film gauge, optimized performance for refrigerated products and improved toughness and durability to ensure your products are delivered to your customers safely. SealGards innovative coextruded film structure delivers all the benefits you want and makes no compromises!

SUSTAINABILITY
The 20% reduction in SealGard dairy BiB film reduces raw material consumption versus the Industry benchmark film. SealGard also reduces carbon emissions during transportation to our customers since up to 25% more bags can be shipped per box due to the reduction in film gauge. Waste is significantly reduced because the dairy bags are significantly lighter when it comes to recycling and waste disposal. This sustainability advantage is of top priority amongst dairy customers and ultimately their quick serve restaurant customers.

SEALGARD OPTIMIZED BAG-IN-BOX DAIRY FILM
SealGard film results in dairy bags that are lighter weight, have improved seals, superior drop height performance, fewer leakers in the field, reduced material usage and reduce inbound shipping costs by up to 25%! The reduction in raw materials and superior performance makes SealGard the material of choice in top dairy markets today.
SealGard continues to advance what’s possible with flexible packaging by reducing film gauge while increasing performance and usability.
