

**Preserve the premium
bag-in-box wine
experience**

Protect the quality of your wines from the first press to the final pour

The premiumization of boxed wine has raised the stakes for liquid packaging solutions. Now, more than ever, brands need packaging that preserves the integrity of their high-end bag-in-box wine for an extended period of time.

Liqui-Box wine bags feature our patent-pending $\text{Vino}_2\text{Gard}^{\text{TM}}$ film, engineered to meet and exceed the stringent requirements of premium boxed wines. Vino_2Gard delivers unprecedented protection from oxidation for even the most complex profiles—targeting a shelf life of 18 months versus the industry standard of 12 months.

With Vino_2Gard , your customers can enjoy their favorite wines for longer, while you enjoy a packaging solution that goes above and beyond industry benchmarks.

Liqui-Box uses a portfolio of outer barrier wine-grade films with Vino_2Gard to offer the full spectrum of oxygen barrier performance

Technical ingenuity you can raise a glass to

Proven high-barrier films. Superior flex crack technology. Outstanding mechanical performance. From bag to tap, Liqui-Box wine bags are engineered to outperform at every level. Ingenious Vino₂Gard film, combined with a proprietary product contact inner ply, offers a level of protection unmatched in the industry. With Vino₂Gard, every note of your wine is preserved for longer enjoyment.

More Reliable

From a secure supply chain to seamless performance on the line, Vino₂Gard ensures a fluid production process for greater speed to market.

More Durable

Vino₂Gard's incredible strength protects your wines during packaging, transportation and storage—delivering the structural integrity needed to keep your products safe at every turn.

More Sustainable

Our coextruded films and thermally laminated structures are engineered to improve film orientation and mechanical properties, resulting in high-performance wine bags that minimize product waste, packaging and CO₂ emissions.

Vino₂Gard laminated structure is engineered to run lean and clean

- Excellent low-friction characteristics to ensure smooth operation during filling and loading, with high resistance to flex cracking
- Uses no solvents and chemicals
- Best-in-class resistance to oxygen transmission, extending shelf life and protecting color and consistency
- Balanced in orientation, resulting in a tougher bag
- Designed to be a more supple, flexible lamination that can stand up well to all the demands of the application

Fewer trucks for a smaller carbon footprint
